HELPING PEOPLE SAY AHHHHH!

Measure and Track Jaw Movement

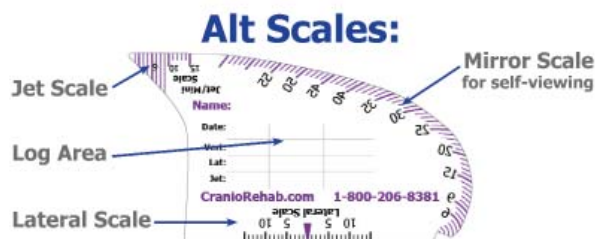

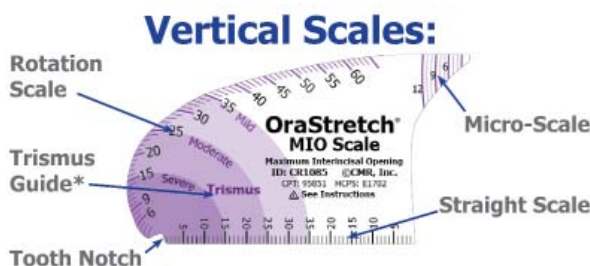

Maximum-Interincisal-Opening (MIO) Scales

The **OraStretch[®]** Maximum-interincisal-opening (MIO) scales are disposable paper measuring scales for patients and providers to measure the opening, movement and function of the mouth and jaw.

The rotation scale allows for quick measurement of the oral opening, with additional scales for improved measuring severely limited and lateral ranges.

The **OraStretch** MIO scales also include a lateral movement scale and a pro/retrusion scale. These allow the provider to better gauge the total 360-degree movement of the patients jaw.

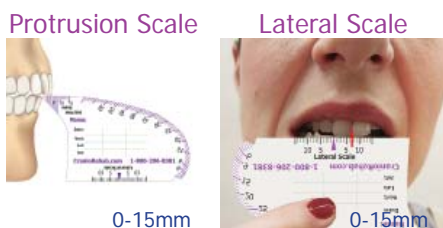

With simple use and accurate tracking, patients are motivated and clinicians feel more assured in progress. By quantifying the treatment method and results with concrete measurements, better diagnosis and treatment is possible and use throughout the day.

OraStretch MIO Scales:

- Vertical, lateral and pro/retrusion scales
- 50 scales per pack
- Measures to 3mm minimum opening
- Easier to read.
- Designed for quick measurement of large to small openings.

Usage:

OraStretch MIO Scales

Vertical Scale	Yes
Lateral Scale	Yes
Pro/Retrusion Scale	Yes
Minimum ROM	3mm
Pack	50 Scales
